

Use Case #1

Produce a sound item remotely

Context :

As a journalist, when I am working remotely, I have to produce programs or interviews in order to feed the broadcast. I can perform this task as long as I have a laptop with an internet connection available.

Scenario :

1 - Search for interviews, jingles on the master database.

- Open RadioAssistOnline
- Start a search

2 - Retrieve my sound element.

- Open the context menu of the selected item
- Start the download

3 - Edit the audio project with the retrieved elements

- Open SnippetSA or SnippetSA+
- Load the retrieved elements
- Edit

4 - Generate a master on the main database

- Open SnippetSA or SnippetSA+
- Start the masterizing process
- Fill the index sheet
- Automatic transfer of the master to the master database

5 - Flag the element as "Broadcastable"

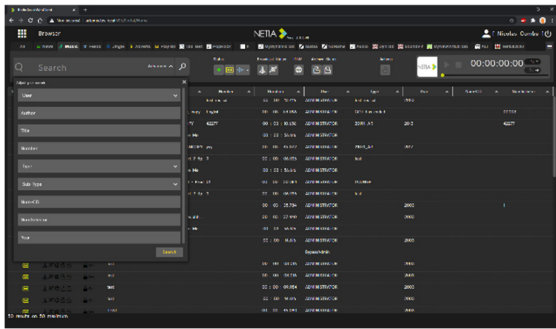

- Open RadioAssistOnline
- Flag the master as "Broadcastable"

6 - Make people listen to my master

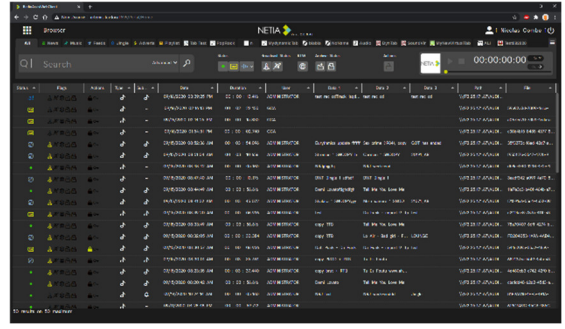

- Give the title to the recipient
- Open RadioAssistOnline
- Search for the master element
- Listen to the master online
- Validate the master

7 - Flag the element as "RTB"

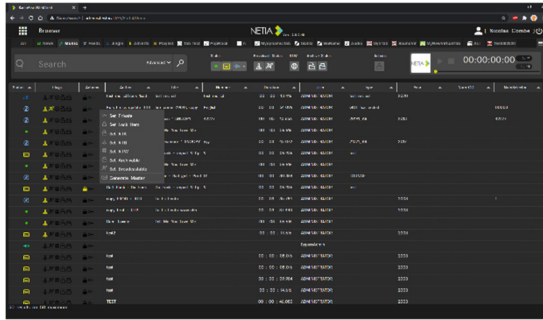

- Open the context menu of the selected item
- Flag the master as "Ready To Broadcast"
